THE INVISIBLE INNOVATION.

A hidden revolution redefining the way we look at ourselves

There is a new way to imagine the mirror.

Invisible at first sight, yet capable of transforming the space and the everyday gesture of reflection.

We have developed a unique system:

a **fully integrated magnifying mirror** built seamlessly into the main mirror surface, available **with or without lighting**, and engineered to **move smoothly** thanks to a **concealed internal arm**.

The result is a clean, elegant, continuous surface – where technology disappears and design prevails.

The magnifying mirror can be adjusted **vertically and horizontally**, following the user's natural movements without disturbing the purity of the overall aesthetic.

Available in **any size, shape, or finish**, this system integrates perfectly into interior design projects for hotels, spas, and high-end residential spaces, offering a new user experience: intuitive, ergonomic, and unexpectedly refined.

Not just a mirror. A mirror within.

World premiere at HIX London - 26-27 November 2025
